Technique 2: Visualization 1

Lyndsay T. Wilson 8.6K reads

Visualization is much more potent than you might have ever thought. Your imagination can have profound, very real effects on your physical and mental wellbeing.

The mind is a powerful thing. Here's a quick trick you can do right now to prove it.

The banner features the Explorable logo and the text 'Quiz Time!' in a white, handwritten-style font on an orange background. Below the logo are three quiz cards, each with a white border and a central image. The first card shows a pair of red roller skates on a wooden deck, with the text 'Quiz: Psychology 101 Part 2' below it. The second card shows a fan of colorful pencils, also with the text 'Quiz: Psychology 101 Part 2' below it. The third card shows a Ferris wheel at sunset, with the text 'Quiz: Flags in Europe' below it. To the right of the cards is a white button with the text 'See all quizzes =>'.

Imagine It Like It's Real

Take a moment to imagine a nice, juicy lemon in real life, right now. Picture how it smells as you bring it closer to your face, how it's cool, waxy peel feels on your fingertips, its bright, fresh yellow color and the way the light catches each of its tiny cells.

Include All Your Senses

Now, imagine you're bringing it closer to you and into your mouth, onto your tongue, and immediately tasting the sharp – almost electric! – feel of the citric acid hitting your taste buds. Take a moment to really imagine your face curling up from the sour taste.

Physical Reactions to Imagined Incentive

Now, if you've really imagined this in depth, you may notice something – you actually begin to

salivate. It's as if your body really did encounter a real lemon. Your taste buds, responding to the contents of your mind, prepared themselves for a lemon that wasn't really there. Your body, in other words, doesn't know the difference between the real and imagined lemon.

Why Is This Important for Worrying?

Your imagination forms the bridge between the unreal and the real, and an imaginary vision of a lemon can have real, tangible results in your body. When you stress, you take an unreal image and turn it into the real release of cortisol and adrenaline (stress hormones) in your body. This translates to real muscle aches, real injuries, real loss of sleep, real headaches and eventually, real illness.

This is why positive and relaxing visualization can be so powerful – by imagining peaceful states of mind, we literally bring them into being.
