Informed Consent

Informed Consent Process?

When is Confidentiality not an Issue

Why is Confidentiality Important in Research?

Sample A

Sample B

Confidentiality

In some cultures a subject's participation alone could result in public punishment, being brought attention to herself, she disclosed the information believing it would be kept confidential.

Privacy in research refers to the confidentiality afforded to participants in the research.

In cases where there are large groups being assessed it is up to the researcher to use good judgment in determining how much personal data that should be collected will be used for.

Research staff should be properly trained in procedure to maintain confidentiality.

Research may focus on topics that are taboo in society and it would be difficult to illicit meaningful commitments from participants if there is fear of backlash in terms of actions being taken. A participant or subject is more likely to provide honest responses when their identity is not going to be exposed.

Research staff should be properly trained in procedure to maintain confidentiality.
