Research Basics

Oskar Blakstad 717.5K reads

The research process deals with the ways and strategies used by researchers to understand the world around us. This is a guide to basic elements of scientific research.

Research Methods [1]

Formulating questions, collecting data, testing hypotheses

Experimental Research [2]

Setting up experiments
What is Research?

What is Research?  [5]

Basics of the Scientific Method  [6]

What is Empirical Research?  [7]

What is the Scientific Method?  [8]

Definition of Research  [9]

Definition of the Scientific Method  [10]

Definition of Science  [11]

Steps

Steps of the Scientific Method  [12] - The scientific method has a similar structure to an hourglass - starting from general questions, narrowing down to focus on one specific aspect  [13] , then designing research where we can observe and analyze this aspect.

At last, the hourglass widens and the researcher concludes  [14] and generalizes  [15] the findings to the real world.
Aims of Research

The general aims of research [16] are:

- **Observe** [17] and **Describe**
- **Predict** [18]
- **Determination of the Causes** [19]
- **Explain**

**Purpose of Research** [20] - Why do we conduct research? Why is it necessary?

Elements of Research

Common scientific research elements [21] are:

**Characterization** - How to understand a phenomenon

- **Decide what to observe** [22] about a phenomenon
- **How to define the research problem** [13]
- **How to measure** [23] the phenomenon

**Hypothesis** [24] and **Theory** [25]

- The research questions [13] before performing research
- Almost always based on previous research
Prediction [18]

- What answers do we expect?
- Reasoning [26] and logic on why we expect these results

Observation [17] or Experimentation [2]

- Testing characterizations, hypothesis [27], theory and predictions
- Understanding a phenomenon better
- Drawing Conclusions [14]
